

Added Features to Version 3

Updates to Version 2 have ended. Now is the time to step up to Version 3. We are proactively adding features that many of our customers have asked for in the past. These features include but are not limited to:

Enhanced electronic bidding with compatibility with AASHTO, ICX and Expedite.

Improvements to many of the accounting exports.

Improved Section placements.

Support subscribers no longer need the USB key for Version 3. (Call us to see how this benefits you.)

Ability to access the program remotely using RDP.

Improved re-number Bid Items template.

Added the ability for Support to retrieve a deleted project.

Electronic Bidding

Many State DOT's have relied on BidX[®] using Expedite[®] to offer and receive bids electronically. We have recently been notified that there are two additional programs that some State DOT's are using. **ICX** or Integrated Contractors Exchange and **AASHTO** or American Association of State Highway and Transportation Officials. Both programs are available for download from your State DOT website if used in your state. The Construction Link has been working with both ICX and AASHTO to insure seamless transition to and from Estimating Link Version 3. Continued development for Version 2 has ceased and interfaces will not be available for 2.354 or earlier. If you don't see The Construction Link in the list of bidding software providers, contact your DOT administrator.

Upcoming Training

Once again, The Construction Link will be offering training at 3 locations in the US. The full day seminars are geared for both the inexperienced and experienced users and in addition to providing training on Estimating Link Version 3, we will also be demonstrating the use of Electronic Bidding. The training provides a great opportunity to meet and hear from other estimating professionals as well as learn about all of the new features we have included in Version 3. The Locations for the trainings are:

Albany, New York January 20, 2017

New Orleans, Louisiana February 10, 2017

Houston, Texas April 14, 2017

Updating Estimating Link

We urge you to consider updating your Estimating Link Version 3 program when notified of an available update. In addition to the update, you may receive a message that your database needs to be updated as well. When prompted to back up the current database, please select **YES**. Currently we are in release 3.0.774(83)

On-Site Training

We offer personalized onsite training, at your office, tailored to the needs of your team, as well as online training. Please email info@tcli.com for more information.

*Subscribing to a **Support and Maintenance Plan** will ensure that you always have the most current version and help is a phone call away. Call us today if you have questions concerning your plan.*
